

Status iFOBT

Immunochemical Fecal

Occult Blood Test

Not to be taken internally for *external* use

LifeSign, LLC

Content of Kit**Test Procedures****STEP 1: Writing your ID on the Sample Collection Tube label**

- Using a ballpoint pen, write your name and date of sample collection on tube label.

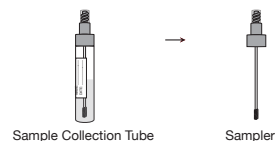

STEP 2: Make bowel movement onto collection paper

- Take Collection Paper out of the envelope.
- Peel off cover strip from the tape on each end of the paper.
- Lift toilet seat. Spread paper across the bowl.
- Secure the paper onto the side first by placing adhesive tabs on the sides of the toilet rim, then secure the other side. Replace the toilet seat.
- Make bowel movement onto Collection Paper.

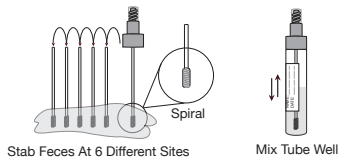

NOTE: Do not allow collection paper or feces to come into contact with toilet water or urine. The sample should not be tested if it becomes wet or contaminated. If this happens, place a clean tissue on the collection paper, then collect new feces sample for testing.

**STEP 3: Stool Sample Collection**

- Unscrew the Sampler Cap from the Sample Collection Tube. Do not spill or pour out the liquid.

- With the stool still on the Collection Paper, randomly poke the spiral end of the Sampler in at least 6 different sites of the stool. **DO NOT SCOOP.**
- Insert the Sampler back into the Sample Collection Tube and firmly tighten screw cap.
- Shake the tube well to mix the stool and test solution.

- Print your name and date on the vial.

STEP 4: Mailing

- Place collection tube in plastic bag.
- Place plastic bag in mailing envelope.
- Peel tape from envelope flap.
- Fold flap on prefold line and press firmly.
- Return to your doctor or laboratory.
